## Observation-17: Australian Cyclone History-2

Australian Bureau of Meteorology Cyclone History Data

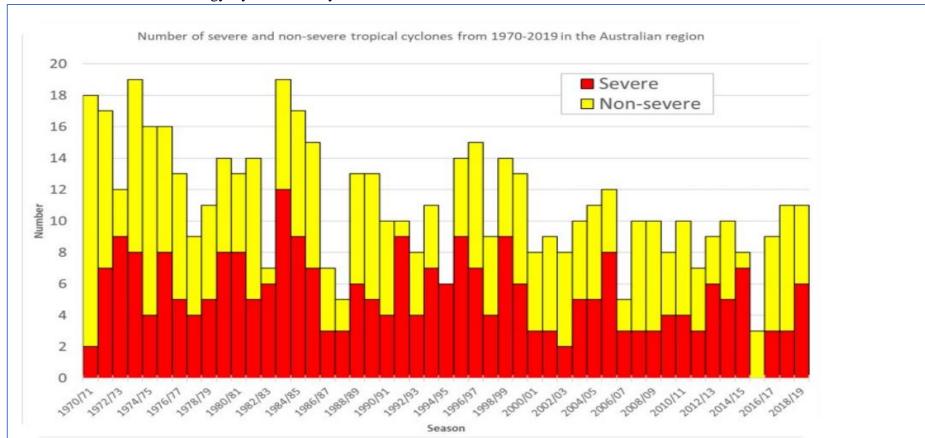

Figure 1. The number of severe and non-severe tropical cyclones from 1970-2019 which have occurred in the Australian region. Severe tropical cyclones are shown here as those which have a peak Current Intensity (CI) value of 4.5 or above or (where no CI value is available) a minimum central pressure of 960 hPa or below, approximating the modern definition of a category 3 (or above) cyclone.
